

What is the percentage of students at your institution who graduate with student loan debt?

- Include December and May graduates in the calculations. Include summer for institutions that recognize summer graduates separately. Do not include any graduate students or those working on a second undergraduate degree. For schools wanting to track graduate debt, please do so separately as a different cohort.
- Cohort should consist of all graduates in each semester combined (summer+fall+spring).
- Cohort should include students who began as first-time entering students at your institution. Students who transferred to your institution should be excluded.
- When pulling loan debt totals, only include what is borrowed at your institution, not debt transferred in from another school.

What is the average student loan debt for students at your institution upon graduation?

- When calculating the average debt for those that borrowed, only include the population that borrowed money. For those students not borrowing, they should not be included in the average loan debt calculation.
