

Join us on July 10

State of Oklahoma Security Architecture Briefing

You are cordially invited to join a select group of your peers, along with Cisco Systems, for an afternoon of lively discussion, networking, and lunch. This Lunch and Learn event is designed to provide the knowledge, tools, and resources to better understand the issues around securing government and enabling technology to improve communications inside and outside the public sector.

Government agencies and organizations are reinventing the way they operate, communicate, and deliver services. Internet-based network solutions are being applied to address the new challenges faced by public service departments and agencies. Increased use of the Internet, however, means greater exposure to network security risks.

Cisco Systems helps governments improve their network security by offering technology solutions that enable quick response to unplanned events and emergencies, as well as secure delivery of citizen services.

Learn how to create an effective solution that:

- Securely extends access to citizens, contractors, and mobile employees
- Protects files that contain citizens' personal information
- Defends the network against network threats and intrusions that could interrupt services
- Complies with federal regulations governing the privacy of data

We'll discuss these and more at this afternoon event. **Sign up today to reserve your spot.**

Date and Location

Monday, July 10, 2006

12:30 p.m.–4:30 p.m.

Presbyterian Health Foundation Conference Center

655 Research Parkway, Suite 100

Oklahoma City, OK 73104
